TANDEM VECTOR LANYARDS

At the Safety & Training Committee (STC) and Riggers Sub-Committee meetings of the 10th December 1998 it was decided that the lanyard on Tandem Vector rigs be upgraded to the crystal ball type, that has a Swedish stainless steel shackle, with a solid forged pin (not the old style wire welded pin), in line with the Relative Workshop recommendation.

Though the Relative Workshop recommended that this upgrade is carried out once a rig has completed 600 descents, the STC and Riggers Committees decided that the upgrade must take place at the latest by the next reserve repack.

Therefore any Tandem Vector rig that has not been upgraded, must be so by the next reserve repack or by the 10th May 1999 whichever is soonest.
