

### Exit Phase (Before Drogue Fall)

***Bag out immediately on exit***

Deploy drogue, release drogue immediately and expect malfunction – (If cannot deploy drogue), cut-away and deploy reserve

***Unstable on exit***

Try to physically rectify student's position to gain stability, if unsuccessful deploy drogue preferably in a face to earth position

***Side spin***

If left side down, deploy drogue, if right side down initiate reserve deployment. It may still be advantageous to deploy drogue even if right side down

***Drogue release handle pulled prior to deployment of drogue***

Immediately deploy drogue

***Unable to locate drogue***

Make second and third attempt to locate drogue again, check drogue has not prematurely deployed, if not immediately initiate reserve deployment

***Drogue handle comes off***

Drop handle, reach back to drogue pouch, grab cordura cap fabric and throw as normal.

### Drogue Fall

***Drogue is thrown but not above tandem pair***

Check if drogue has been thrown. If drogue pouch is empty, roll to side (right shoulder down) to allow clean air to free drogue from burble. If after 2 attempts of this method the drogue is still not up pull reserve.

***Drogue bridle becomes entangled***

Have one attempt to clear, if unsuccessful initiate reserve deployment

***Deflated drogue in tow***

Proceed with skydive as normal, pull 1000ft higher to allow for a slower deployment.

***Drogue detaches / breaks***

Immediately initiate reserve deployment

***Cannot locate drogue release handle***

Pull secondary release handle

***Cannot locate secondary drogue release handle***

Immediately initiate reserve deployment

***Main container opens during drogue fall***

Pull drogue release handle

***Left arm incapacitated by student or injury***

Pull primary release handle

***Right arm incapacitated by injury or student***

Immediately initiate reserve deployment

### Primary Drogue Release Handle Pulled

***Main Malfunctions***

Cut-away and initiate reserve deployment

***Inflated drogue does not release***

Pull secondary drogue release handle

***Inflated drogue in tow***

Immediately initiate reserve deployment

***Drogue detaches / bridle breaks on drogue release pull***

If main does not deploy initiate reserve deployment. If main canopy starts to deploy after reserve deployment, cut away main canopy.
